

"Replacement Sheet"

151

PRIOR ART.

This diagram shows a complex mechanical assembly in cross-section. The main body consists of several interconnected parts:

- 10**: A large, rounded component at the top left, possibly a piston or a seal.
- 11**: A long, angled structural member extending from the top left towards the center.
- 12**: A circular feature located on the angled member 11.
- 13**: A vertical rod or shaft passing through the center of the assembly.
- 14**: A small rectangular component mounted on the central rod 13.
- 17**: A cylindrical component at the bottom right, connected to the main body.
- 18**: A horizontal structural member connecting the lower part of the assembly to the right side.
- 19**: A vertical support or frame element on the far right.
- 20**, **21**, **22**: Various internal components and seals located near the top left corner.
- 23**: A bracket indicating a specific section or group of components on the left side.
- 25**, **26**, **27**, **28**, **29**, **30**, **31**, **32**: Numerous other smaller components, bolts, and fasteners distributed throughout the assembly.

The drawing uses standard engineering conventions, with hatching used to represent different materials or cross-sections of the parts.
